

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): An information search system comprising:
 - a terminal having a speech communication function and packet communication function; and
 - a center for selectively performing speech communication and packet communication with said terminal,
 - said center comprising:
 - speech control means for performing speech communication with said terminal during execution of packet communication by said terminal,
 - speech recognition means for recognizing a speech signal received by said speech control means and sent from said terminal,
 - information search means for searching for information on the basis of the speech information recognized by said speech recognition means,
 - speech conversion means for converting the speech information of the information searched out by said information search means into a speech signal and outputting the signal to said speech control means, the speech signal from said speech conversion means being transmitted to said terminal by said speech control means; and

packet control means for transmitting at least one of image information and character information of the information searched out by said information search means to said terminal by packet communication.

2. (previously presented): A system according to claim 1, wherein said information search means searches for information through the Internet.

3. (previously presented): A system according to claim 1, wherein said system further comprises a table indicating a relationship between a self-station packet communication address of said terminal and a self-station speech communication address, and

said speech control means looks up said table when speech communication is started, and notifies said packet control means of a self-station packet communication address corresponding to the self-station speech communication address of said terminal which is notified by the calling number identification notifying function.

4. (previously presented): A system according to claim 3, wherein the self-station speech communication address is transmitted from said terminal to said center by packet communication, and the relationship between the self-station packet communication address of the packet communication and the self-station speech communication address transmitted from said terminal is registered in said table.

5. (previously presented): A system according to claim 1, wherein a speech communication address of said center is designated by said center with respect to said terminal during execution of packet communication by said terminal, and

a packet communication address of said terminal which has performed speech communication with said center is acquired by specifying said terminal from the terminated speech communication address.

6. (previously presented): A system according to claim 1, wherein said center further comprises communication control means for switching speech communication by said speech control means and packet communication by said packet communication means.

7. (previously presented): A system according to claim 6, wherein said terminal comprises switch means for alternately switching speech communication and packet communication, and

said communication control means performs switching operation in accordance with an output from said switch means.

8. (previously presented): A system according to claim 6, wherein said communication control means automatically performs switching operation under sequence control.

9. (previously presented): A system according to claim 1, wherein said terminal comprises

a microphone to which speech transmitted to said center is input,

a speaker for outputting a speech signal transmitted from said center,

a display screen on which image/character information transmitted from said center is displayed, and

a key operation section for performing dial-input operation.

10. (previously presented): A system according to claim 1, wherein said terminal comprises

radio means for performing radio communication with a base station to which said center is connected,

speech communication means for performing speech communication with said center,

packet communication means for performing packet communication with said center, and

communication control means for switching speech communication by said speech communication means and packet communication by said packet communication means.

Claim 11. (canceled).

12. (currently amended): A terminal ~~according to claim 11, further comprising: of~~
an information search system for searching for information by selectively performing speech
communication and packet communication with a center, comprising:

a microphone to which speech transmitted to the center by speech communication is
input;

a speaker for outputting a speech signal transmitted from the center by speech
communication;

a display screen on which at least one of image information and character information
transmitted from the center by packet communication is displayed;

a key operation section for performing dial-input operation;

radio means for performing radio communication with a base station to which the center is connected;

speech communication means for inputting and outputting a speech signal between said speaker and said microphone by performing speech communication with said center;

packet communication means for outputting at least one of image information and character information to said display screen by performing packet communication with the center; and

communication control means for switching speech communication by said speech communication means and packet communication by said packet communication means.

13. (currently amended): A center of an information search system for searching for information by selectively performing speech communication and packet communication with a terminal, comprising:

speech control means for performing speech communication with the terminal during execution of packet communication by the terminal;

speech recognition means for recognizing a speech signal received by said speech control means and sent from the terminal;

information search means for searching for information on the basis of the speech information recognized by said speech recognition means;

speech conversion means for converting the speech information of the information searched out by said information search means into a speech signal and outputting

the signal to said speech control means, the speech signal from said speech conversion means being transmitted to the terminal by said speech control means; and

packet control means for transmitting at least one of image information and character information of the information searched out by said information search means to the terminal by packet communication.

14. (previously presented): A center according to claim 13, wherein said system further comprises a table indicating a relationship between a self-station packet communication address of the terminal and a self-station speech communication address, and

said speech control means looks up said table when speech communication is started, and notifies said packet control means of a self-station packet communication address corresponding to the self-station speech communication address of the terminal which is notified by the calling number identification notifying function.

15. (previously presented): A center according to claim 14, wherein the self-station speech communication address is transmitted from the terminal to said center by packet communication, and the relationship between the self-station packet communication address of the packet communication and the self-station speech communication address transmitted from the terminal is registered in said table.

16. (previously presented): A system according to claim 13, wherein a speech communication address of said center is designated by said center with respect to the terminal during execution of packet communication by the terminal, and

a packet communication address of the terminal which has performed speech communication with said center is acquired by specifying the terminal from the terminated speech communication address.

17. (previously presented): A center according to claim 13, further comprising communication control means for switching speech communication by said speech control means and packet communication by said packet communication means in accordance with switching operation of the terminal.

18. (currently amended): A center of an information search system for searching for information by performing speech communication and packet communication with a terminal, comprising:

speech control means for performing speech communication by said terminal during execution of packet communication by the terminal;

speech recognition means for recognizing a speech signal received by said speech control means and sent from the terminal,

information searching means for searching for information on the basis of speech information recognized by said speech recognition means;

packet control means for transmitting said information searched out by said information search means to said terminal by packet communication.
